

Trimble Juno Important Facts

Calvin College GEO Dept.

- **The Juno is sensitive to weather.**
 - The Juno is water resistant, NOT water proof.
 - If it is raining or there is a chance of rain, please have a zip-lock bag ready to put the Juno in – you can still use the Juno for a limited time in the zip-lock and still get GPS signals. Please allow the unit to get air after awhile.
 - Do not leave the Juno sitting in the sun for an extended time.

- **If you lose your stylus:**
 - Do not use a pen tip or pencil tip in its place – instead use your finger or use the back end of a pen very lightly, but not the tip.

- **If you damage the unit:**
 - Please be sure to report the damage.
 - If you lose the unit, please do your best to recover it.

- **If the unit is not working properly, please seek help .**
 - Before closing TerraSync or shutting off your unit ALWAYS close any open files to avoid the corruption of your data.
 - Never, ever restore to factory default – if you do, your unit will be useless until you turn it in.
 - Microsoft Active Sync software is required to connect your GPS unit to the computer. It is an additional software installed on all Spatial Lab computers in North Hall.

- **The GPS unit is an expensive computer and is subject to the same instability that comes with all mobile computers.**
 - Do not shake the unit unnecessarily
 - Do not drop the unit
 - Do not set the unit on the ground unless logging data
 - Do not let the unit out of your sight
 - NEVER, NEVER, NEVER open the MicroSD SIM slot – if ANY dust or dirt gets in there, the warranty will be void

I have read the above statements and agree with all the requirements of responsible use with the Trimble Juno GPS Unit
